About this section

Logical Reasoning tests how well you spot patterns and draw correct conclusions. Expect number and letter series, coding-decoding, analogies, odd one out, blood relations, directions, syllogisms, ranking, clocks and calendars. Most questions have a hidden rule — find the rule first, then apply it. Writing small notes or drawing a quick diagram makes these questions much easier.

How to use this question bank

- Part A has all 150 questions, grouped by difficulty. Attempt them on your own first, with a timer if you can (about 1 minute per question).
- Part B is the answer key. Check your answers only after finishing a full level.
- Part C explains how to solve every question in simple steps. Read the solution even for the ones you got right — it often shows a faster method.
- Mark the questions you got wrong and attempt them again after two or three days.
