APTITUDE QUESTION BANK

Analytical Reasoning

Placement preparation for IT company hiring tests

Where the Syllabus Ends and Reality Begins

150	Q1 – Q50	Q51 – Q100	Q101 – Q150
Multiple-choice questions	Beginner	Intermediate	Advanced

About this section

Analytical Reasoning asks you to organise information and work out what must be true. Typical questions are seating and ordering puzzles, scheduling, inequalities, data sufficiency, Venn diagrams, dice and cubes, and counting figures. The key habit is to put the clues into a simple table or diagram, start with the most definite clue, and test each option against every clue.

How to use this question bank

- Part A has all 150 questions, grouped by difficulty. Attempt them on your own first, with a timer if you can (about 1 minute per question).
- Part B is the answer key. Check your answers only after finishing a full level.
- Part C explains how to solve every question in simple steps. Read the solution even for the ones you got right — it often shows a faster method.
- Mark the questions you got wrong and attempt them again after two or three days.

PART A

Questions

BEGINNER Questions 1 – 50

Q1. Four friends P, Q, R and S stand in a line. P is first. S is last. Q is right after P. Who is third?

A) R
B) Q
C) P
D) S

Q2. If A > B and B > C, which of these must be true?

A) C > A
B) A > C
C) B > A
D) A = C

Q3. Tom is older than Sam. Sam is older than Ben. Who is the youngest?

A) Sam
B) Tom
C) Ben
D) Cannot be determined

Q4. A dice has numbers 1 to 6. The numbers on opposite faces add up to 7. Which number is opposite 2?

A) 4
B) 6
C) 5
D) 3

Q5. In a group of 30 people, 18 like cricket and 15 like football. Everyone likes at least one game. How many like both?

A) 33
B) 12
C) 15
D) 3

Q6. Five books are stacked. The red book is above the blue book. The green book is at the bottom. The blue book is just above the green. Where is the blue book?

A) 2nd from the top
B) 4th from the top
C) 3rd from the top
D) At the top

Q7. How many triangles are there in a triangle divided into two by a line from one corner to the middle of the opposite side?

A) 1
B) 4
C) 3
D) 2

Q8. A meeting is on Wednesday. The report is due 2 days before the meeting. On which day is the report due?

A) Monday
B) Friday
C) Tuesday
D) Sunday

Q9. If P = 3, Q = 5 and R = P + Q, what is R × 2?

A) 16
B) 8
C) 15
D) 10

Q10. Six students sit in a row. Anu sits at the left end and Bala sits right next to her. How many students sit to the right of Bala?

A) 2
B) 3
C) 5
D) 4

Q11. A is to the left of B. C is to the right of B. Who is in the middle?

A) A
B) C
C) B
D) Cannot be determined

Q12. In a family, there are 3 brothers and each brother has 2 sisters. How many children are there in total?

A) 9
B) 6
C) 5
D) 8

Q13. If all squares are rectangles, which statement is correct?

A) No rectangle is a square
B) Some rectangles are squares
C) All rectangles are squares
D) No square is a rectangle

Q14. A wall clock is hung so that the 12 points north. In which direction does the hour hand point at 9:00?

A) West
B) North
C) East
D) South

Q15. Riya gets more marks than Priya but fewer than Divya. Who scored the highest?

A) Divya
B) Riya
C) Priya
D) Cannot be determined

Q16. A box contains only red and blue pens. There are 12 pens and 5 are red. How many are blue?

A) 17
B) 6
C) 5
D) 7

Q17. Which day comes 3 days after the day before Friday?

A) Saturday
B) Monday
C) Thursday
D) Sunday

Q18. A train leaves at 10:00 and the journey takes 2 hours 45 minutes. When does it arrive?

A) 12:30
B) 12:15
C) 12:45
D) 13:00

Q19. A cube has how many edges?

A) 12
B) 8
C) 6
D) 24

Q20. Four people sit around a square table, one on each side. A sits opposite C. B sits to the right of A. Who sits opposite B?

A) A
B) C
C) D
D) Cannot be determined

Q21. If X is taller than Y, and Z is shorter than Y, which is true?

A) Z is taller than X
B) Z is taller than Y
C) Y is the tallest
D) X is taller than Z

Q22. You have 3 boxes: one with apples, one with oranges and one with both. How many boxes contain apples?

A) 3
B) 2
C) 1
D) 0

Q23. Which number is missing? 2, 4, 6, __, 10

A) 12
B) 9
C) 8
D) 7

Q24. A is the brother of B. B is the sister of C. If C is a boy, how many boys are there at least among A, B and C?

A) 2
B) 3
C) 1
D) 0

Q25. In a class of 40, 25 students passed Maths and 30 passed English. All students passed at least one subject. How many passed both?

A) 5
B) 15
C) 20
D) 10

Q26. Five runners finished a race. Arun finished before Bhavna. Chitra finished after Bhavna. Who finished last among the three?

A) Chitra
B) Bhavna
C) Arun
D) Cannot be determined

Q27. If MON = 1, TUE = 2, WED = 3, what is SAT?

A) 7
B) 4
C) 5
D) 6

Q28. A rectangle is cut along one of its diagonals. How many triangles are formed?

A) 3
B) 1
C) 2
D) 4

Q29. Rita is 5th from the top in a class of 20. What is her position from the bottom?

A) 16th
B) 14th
C) 15th
D) 17th

Q30. If '>' means 'greater than', which arrangement shows 7, 3 and 5 correctly?

A) 3 > 5 > 7
B) 7 > 5 > 3
C) 7 > 3 > 5
D) 5 > 7 > 3

Q31. A farmer has 15 cows. All but 6 run away. How many cows are left?

A) 0
B) 15
C) 6
D) 9

Q32. Neha has more pens than Sita. Sita has more pens than Gita. Gita has 4 pens. Which could be the number of Neha's pens?

A) 5
B) 3
C) 4
D) 6

Q33. How many squares are there on a 2 × 2 grid (like four tiles in a square)?

A) 4
B) 6
C) 8
D) 5

Q34. A shop opens at 9 AM and closes at 6 PM. How many hours is it open?

A) 9
B) 10
C) 8
D) 7

Q35. Mohan, Sohan and Rohan have different heights. Sohan is not the tallest. Rohan is the shortest. Who is the tallest?

A) Rohan
B) Sohan
C) Mohan
D) Cannot be determined

Q36. If every student in a class plays a sport and Amit is a student in that class, what can we conclude?

A) Amit does not play a sport
B) Amit plays a sport
C) Amit plays cricket
D) Amit is the captain

Q37. Which shape comes next in the pattern: circle, square, circle, square, circle, ?

A) Square
B) Triangle
C) Circle
D) Rectangle

Q38. There are 5 houses in a row. The blue house is in the middle. How many houses are to its left?

A) 4
B) 3
C) 1
D) 2

Q39. A watch shows 2:15. What time will it show after 50 minutes?

A) 2:65
B) 3:05
C) 2:55
D) 3:15

Q40. Data sufficiency: What is the value of x?

I. x + 3 = 10

II. x is a positive number

A) Statement I alone is enough
B) Statement II alone is enough
C) Both together are needed
D) Neither is enough

Q41. Four children P, Q, R, S are ranked by height. P is taller than Q. R is taller than P. S is the shortest. What is Q's rank from the tallest?

A) 4th
B) 1st
C) 3rd
D) 2nd

Q42. In a parking lot, cars are parked in a row. A red car is 4th from the left and 6th from the right. How many cars are there?

A) 9
B) 11
C) 8
D) 10

Q43. If 'blue' is above 'green', and 'green' is above 'yellow', which colour is at the bottom?

A) Green
B) Blue
C) Yellow
D) Cannot be determined

Q44. A dice shows 4 on top. What number is at the bottom (opposite faces add to 7)?

A) 2
B) 6
C) 1
D) 3

Q45. Kavya was born 2 years after Meera. Meera is 15 years old. How old is Kavya?

A) 15
B) 13
C) 12
D) 17

Q46. A bus has 40 seats. 28 seats are filled. At the next stop 7 people get off and 12 get on. How many seats are empty now?

A) 7
B) 12
C) 33
D) 5

Q47. If Monday is a holiday and every holiday is followed by a working day, what is Tuesday?

- **A)** A working day
- **B)** A holiday
- **C)** Sunday
- **D)** Cannot be determined

Q48. How many corners (vertices) does a triangular prism have?

- **A)** 8
- **B)** 9
- **C)** 5
- **D)** 6

Q49. Divya, Esha and Fatima share a pizza with 9 slices equally. Esha gives one of her slices to Divya. How many slices does Divya have now?

- **A)** 3
- **B)** 5
- **C)** 2
- **D)** 4

Q50. In a code, 1 = A, 2 = B, 3 = C. What does 3-1-2 spell?

- **A)** ABC
- **B)** CAB
- **C)** CBA
- **D)** BAC

INTERMEDIATE Questions 51 – 100

Q51. A, B, C, D and E sit in a row facing north. C is in the middle. A is at the left end. E is next to C on its right. B is not next to A. Where does D sit?

A) 3rd from the left
B) At the right end
C) 2nd from the left
D) 4th from the left

Q52. Six people — P, Q, R, S, T, U — sit around a round table facing the centre. P is opposite S. Q is to the immediate right of P. R is opposite Q. Who is opposite T if U is next to S?

A) U
B) P
C) R
D) Q

Q53. Data sufficiency: Is the integer n even?

I. n^2 is even.

II. n + 3 is odd.

A) Only II is enough
B) Only I is enough
C) Each statement alone is enough
D) Neither is enough

Q54. A meeting must be scheduled on one day from Monday to Friday. Ravi cannot attend on Monday or Thursday. Sita cannot attend on Tuesday. Hari cannot attend on Wednesday or Friday. On which day can all three attend?

A) Wednesday
B) Friday
C) Tuesday
D) No day works for all three

Q55. If P + S = Q + R and Q > P, which of these must be true?

A) P > Q
B) S > R
C) R = S
D) R > S

Q56. A cube is painted on all faces and then cut into 64 equal smaller cubes. How many small cubes have exactly one face painted?

A) 24
B) 32
C) 16
D) 8

Q57. In a survey of 100 people, 60 read newspaper A, 45 read B and 25 read both. How many read neither?

A) 15
B) 20
C) 10
D) 25

Q58. Five boxes A–E have different weights. B is heavier than A but lighter than C. D is heavier than C. E is the lightest. Which box is the second heaviest?

A) Part A
B) Part B
C) Part C
D) No error

Q59. Input: 'go 15 run 42 sit 8'. Step 1 arranges words alphabetically and numbers ascending, keeping word-number positions: 'go 8 run 15 sit 42'. If the input is 'tea 30 cup 12 milk 21', what is Step 1?

A) milk 12 cup 21 tea 30
B) tea 12 milk 21 cup 30
C) cup 30 milk 21 tea 12
D) cup 12 milk 21 tea 30

Q60. A train leaves station X at 8:00 AM and reaches Y at 11:30 AM. Another leaves Y at 9:00 AM and reaches X at 12:00 noon. At about what time do they meet?

A) About 10:09 AM
B) About 10:30 AM
C) About 10:00 AM
D) About 9:30 AM

Q61. Data sufficiency: How old is Raj?

I. Raj is 4 years older than Mira.

II. Mira is half of Raj's age.

A) Only II is enough
B) Only I is enough
C) Both statements together are needed
D) Neither is enough

Q62. How many squares are there on a 3 × 3 grid?

A) 10
B) 14
C) 9
D) 13

Q63. A, B, C, D and E are five friends with different ages. A is older than only E. C is younger than D but older than B. Who is the oldest?

A) Part A
B) Part B
C) Part C
D) No error

Q64. Seven lectures (P to V) are held on 7 days of a week starting Monday. Q is on Wednesday. P is the day before Q. S is the day after Q. T is on Sunday. Which lecture is on Thursday?

A) T
B) Q
C) S
D) P

Q65. If 'A × B' means A is the father of B, 'A + B' means A is the wife of B, and 'A − B' means A is the son of B, how is P related to R in 'P + Q × R'?

A) P is R's mother
B) P is R's grandmother
C) P is R's aunt
D) P is R's sister

Q66. In a class, 70% passed Physics, 60% passed Chemistry and 40% passed both. What percentage failed in both?

A) 0%
B) 30%
C) 10%
D) 20%

Q67. A dice is thrown twice. The first time it shows 1, 2, 3 on adjacent visible faces; the second time 2, 3, 6 are visible. What is opposite 1 if opposite faces are not assumed to add up to 7?

A) 4
B) 3
C) 2
D) 6

Q68. Inequality: A ≥ B > C = D < E. Which conclusion is definitely true?

A) B < D
B) A > D
C) C > E
D) E > A

Q69. A clock strikes once at 1 o'clock, twice at 2, and so on. How many times does it strike in 12 hours (1 o'clock to 12 o'clock)?

A) 78
B) 72
C) 84
D) 66

Q70. There are 4 boxes: Red, Green, Blue, Yellow, placed one above another. Green is above Red. Blue is below Yellow but above Green. Which box is at the bottom?

A) Blue
B) Yellow
C) Green
D) Red

Q71. Six students scored 45, 52, 61, 38, 70 and 55. What is the median score?

A) 52
B) 53.5
C) 55
D) 54

Q72. If it rains, the match will be cancelled. The match was not cancelled. What can be concluded?

A) It rained
B) The match was postponed
C) It did not rain
D) Nothing can be concluded

Q73. Data sufficiency: Is x > y?

I. x = 2y

II. y is positive

A) Only II is enough
B) Only I is enough
C) Both statements together are needed
D) Neither is enough

Q74. A family has 4 members: father, mother, son, daughter. The son is taller than the father. The mother is shorter than the daughter. The daughter is shorter than the father. Who is the shortest?

A) Mother
B) Father
C) Daughter
D) Son

Q75. In how many ways can 3 people sit in a row of 3 chairs?

A) 27
B) 6
C) 9
D) 3

Q76. Eight people form a line. Ravi is 3rd from the front. Gita is 2nd from the back. How many people are between them?

A) 2
B) 5
C) 3
D) 4

Q77. If Monday is the 1st of a month with 30 days, how many Mondays are in that month?

A) 6
B) 5
C) 4
D) 3

Q78. A, B, C and D play a game. A scored more than B. C scored less than D. B scored more than D. Who scored the least?

A) Part A
B) Part B
C) Part C
D) No error

Q79. A Venn diagram has two circles: 'Engineers' and 'Managers'. 12 people are only engineers, 8 are only managers and 5 are both. How many are engineers in total?

A) 25
B) 12
C) 17
D) 20

Q80. Five friends J, K, L, M, N are seated in a row. K is between J and L. M is at the right end. N is to the left of J. Who is in the middle?

A) K
B) N
C) L
D) J

Q81. How many triangles are there in a square with both diagonals drawn?

A) 6
B) 8
C) 10
D) 4

Q82. In a code, 'red blue green' = '1 2 3', 'blue yellow' = '2 4', 'green pink' = '3 5'. What is the code for 'yellow'?

A) 4
B) 3
C) 2
D) 5

Q83. A man has to visit 4 shops A, B, C, D. He must visit A before B, and C before D, and D must be the last. Which order is possible?

A) B, A, C, D
B) A, D, C, B
C) C, D, A, B
D) A, C, B, D

Q84. Data sufficiency: What is the area of the rectangle?

I. Its perimeter is 20 cm.

II. Its length is 6 cm.

A) Only I is enough
B) Only II is enough
C) Both statements together are needed
D) Neither is enough

Q85. Three switches outside a room control one bulb inside. You may enter the room only once. How can you find which switch controls the bulb?

A) Turn one on for a while, turn it off, turn another on, then enter and check light and heat
B) Turn each switch on and off quickly
C) Turn all three on at once
D) It cannot be done

Q86. Inequality: P < Q ≤ R = S > T. Which conclusion is definitely true?

A) P > T
B) T > Q
C) S > P
D) Q > S

Q87. A, B, C, D, E and F are six cities. A is north of B. C is south of B. D is north of A. Which city is the farthest north among A, B, C and D?

A) Part A
B) Part B
C) Part C
D) No error

Q88. Six plays are scheduled from Monday to Saturday, one per day. Play X is on Wednesday. Play Y is two days after X. Play Z is just before X. On which day is Y?

A) Thursday
B) Tuesday
C) Saturday
D) Friday

Q89. In a group of 50 students, 30 study French, 25 study German and 10 study both. How many study only German?

A) 15
B) 10
C) 25
D) 20

Q90. A, B and C have 30 marbles in total. A has twice as many as B. C has 6 more than B. How many does B have?

A) 10
B) 6
C) 12
D) 8

Q91. If the 1st of a month is a Thursday, what day is the 25th?

A) Monday
B) Friday
C) Saturday
D) Sunday

Q92. Four teams play each other exactly once. How many matches are played in total?

A) 8
B) 4
C) 6
D) 12

Q93. A, B, C, D are four floors of a building from 1 (bottom) to 4 (top). A lives above C. B lives on floor 4. D lives below C. Who lives on floor 2?

A) Part A
B) Part B
C) Part C
D) No error

Q94. Statement: 'Only those who have a ticket can enter the hall.' Which must be true?

A) No one has a ticket
B) Everyone with a ticket is inside the hall
C) People without tickets can enter
D) Anyone inside the hall has a ticket

Q95. If 5 machines make 5 bolts in 5 minutes, how long do 100 machines take to make 100 bolts?

A) 20 minutes
B) 5 minutes
C) 100 minutes
D) 1 minute

Q96. A number is greater than 20 and less than 30. It is a multiple of 4 and of 3. What is the number?

A) 24
B) 27
C) 28
D) 21

Q97. In a row of 21 girls, Sunita is 11th from the left. Where is she from the right?

A) 11th
B) 9th
C) 12th
D) 10th

Q98. A says: 'B is lying.' B says: 'C is lying.' C says: 'A and B are both lying.' Who is telling the truth?

A) Only A
B) Only B
C) A and C
D) Only C

Q99. Three friends order different drinks: tea, coffee, juice. Arjun does not drink tea or coffee. Bindu does not drink tea. What does Chetan drink?

A) Tea
B) Juice
C) Coffee
D) Cannot be determined

Q100. Data sufficiency: What day of the week is 10 June?

I. 3 June is a Tuesday.

II. June has 30 days.

A) Only II is enough
B) Only I is enough
C) Both are needed
D) Neither is enough

ADVANCED Questions 101 – 150

Q101. Eight people sit around a circular table facing the centre. A is opposite E. B is to the immediate right of A. C is opposite B. How many people sit between C and E (counting the shorter way)?

A) 3
B) 2
C) 1
D) None — they are neighbours

Q102. Data sufficiency: Is the product xy positive?

I. x/y is positive.

II. x + y is negative.

A) Only II is enough
B) Only I is enough
C) Both are needed
D) Neither is enough

Q103. Seven people P, Q, R, S, T, U, V attend a seminar on different days, Monday to Sunday. R attends on Wednesday. Exactly two people attend between R and V. U attends immediately after V. T attends on Monday. P attends on Friday. Q attends before S. Who attends on Tuesday?

A) U
B) S
C) Q
D) V

Q104. A cube is painted blue on all faces and cut into 125 equal cubes. How many small cubes have no face painted?

A) 27
B) 36
C) 8
D) 64

Q105. Five people sit in a row. Ajay is not at either end. Bina is to the immediate right of Ajay. Chetan is at the right end. Deepa is to the left of Ajay. Esha is next to Chetan. What is Bina's position from the left?

A) 5th
B) 4th
C) 2nd
D) 3rd

Q106. Inequality: A > B ≥ C; D ≤ C < E; F > A. Conclusions: I. F > D. II. E > B.

A) Only I follows
B) Only II follows
C) Both follow
D) Neither follows

Q107. In a group, 40 people speak English, 30 speak Hindi, 25 speak Tamil. 15 speak English and Hindi, 10 English and Tamil, 8 Hindi and Tamil, and 5 speak all three. Everyone speaks at least one. How many people are in the group?

A) 95
B) 67
C) 70
D) 62

Q108. A, B, C and D each tell one statement. A: 'B did it.' B: 'D did it.' C: 'I did not do it.' D: 'B is lying.' Exactly one person is telling the truth. Who did it?

A) Part A
B) Part B
C) Part C
D) No error

Q109. Data sufficiency: What is the value of the two-digit number N?

I. The sum of its digits is 9.

II. The tens digit is twice the units digit.

A) Only I is enough
B) Only II is enough
C) Both statements together are needed
D) Neither is enough

Q110. Data sufficiency: What is the value of x + y?

I. $2x + 2y = 18$

II. $x - y = 1$

A) Only II is enough
B) Only I is enough
C) Both are needed
D) Neither is enough

Q111. Six people A–F live on six floors (1 bottom to 6 top). A lives on an even floor. B lives just below C. D lives on the top floor. E lives on floor 1. F lives just above A. B lives on floor 4. Who lives on floor 2?

A) C
B) A
C) B
D) F

Q112. Statements: Some kings are queens. All queens are princes. No prince is a soldier.

Conclusions: I. Some kings are not soldiers. II. Some princes are kings. III. No queen is a soldier.

A) All three follow
B) Only I and II follow
C) Only II and III follow
D) Only III follows

Q113. Four friends A, B, C, D each own one pet: cat, dog, parrot, fish. A does not own the cat or the dog. B owns the parrot. C does not own the cat. What does D own?

A) Cat
B) Dog
C) Fish
D) Parrot

Q114. Input: 48 29 75 13 62. Each step swaps one pair to move the largest remaining number to the right end (like bubble sort, one pass per step). After the first full pass, what is the arrangement?

A) 13 29 48 62 75
B) 29 48 13 62 75
C) 48 29 13 62 75
D) 29 13 48 62 75

Q115. A number is divisible by 2, 3 and 5 and lies between 100 and 150. What is the number?

A) 130
B) 144
C) 105
D) 120

Q116. How many rectangles (including squares) are there on a 2 × 3 grid of squares?

A) 12
B) 20
C) 18
D) 6

Q117. Data sufficiency: Among P, Q and R, who is the tallest?

I. P is taller than Q.

II. R is shorter than Q.

A) Only I is enough
B) Only II is enough
C) Both statements together are needed
D) Neither is enough

Q118. A schedule has five tasks T1–T5 to be done one after another. T2 must come after T1. T4 must come before T3. T5 must be last. T1 must be done second. Which task is done first?

A) T5
B) T3
C) T4
D) T2

Q119. Each of five boxes holds a different number of balls: 2, 4, 6, 8, 10. Box P has more than Q. R has 6. S has the most. T has fewer than Q. How many balls are in Q?

A) 6
B) 8
C) 2
D) 4

Q120. If the day after tomorrow is Sunday, what day was it three days before yesterday?

A) Monday
B) Wednesday
C) Tuesday
D) Sunday

Q121. A cube has its faces coloured: red opposite green, blue opposite yellow, white opposite black. If red is on top and blue is in front, which colour is at the back?

A) Yellow
B) Green
C) Black
D) White

Q122. Five people have scores: A beats B, C beats D, E beats A, D beats E, and no one beats C. Rank from highest: which order fits?

A) C, D, A, E, B
B) C, E, D, A, B
C) C, D, E, A, B
D) E, C, D, A, B

Q123. A bag has red, green and blue balls. Red : green is 2 : 3 and green : blue is 4 : 5. If there are 70 balls, how many are blue?

A) 35
B) 30
C) 16
D) 24

Q124. Seven boxes are stacked: L, M, N, O, P, Q, R. P is at the top. R is just below P. O is at the bottom. M is just above O. N is between R and Q, and Q is above L. What is the position of L from the top?

A) 4th
B) 3rd
C) 6th
D) 5th

Q125. Data sufficiency: Is a triangle right-angled?

I. Its sides are 5, 12 and 13.

II. One angle is 50°.

A) Only II is enough
B) Only I is enough
C) Both are needed
D) Neither is enough

Q126. In a tournament, every team plays every other team twice. There are 56 matches in total. How many teams are there?

A) 28
B) 14
C) 8
D) 7

Q127. A says, 'I am not the thief.' B says, 'A is the thief.' C says, 'I am not the thief.' Only one of them is telling the truth, and only one is the thief. Who is the thief?

A) C
B) B
C) A
D) Cannot be determined

Q128. How many times in a day (24 hours) are the hands of a clock in a straight line (either overlapping or opposite)?

A) 22
B) 24
C) 48
D) 44

Q129. Five people — A, B, C, D, E — went to a movie on five different days, Monday to Friday. C went on Wednesday. A went the day after B. D went before C. E did not go on Friday. Who went on Friday?

A) E
B) B
C) A
D) D

Q130. If '@' means '+', '#' means '−', '$' means '×' and '&' means '÷', what is 36 & 4 $ 3 @ 10 # 5?

A) 17
B) 37
C) 22
D) 32

Q131. Statements: All circles are triangles. Some triangles are squares. No square is a rectangle.

Conclusions: I. Some triangles are not rectangles. II. Some circles are squares.

A) Only II follows
B) Only I follows
C) Both follow
D) Neither follows

Q132. A man has exactly ₹100 in coins of ₹5 and ₹10. He has 14 coins in all. How many ₹10 coins does he have?

A) 4
B) 6
C) 10
D) 8

Q133. In a class, students sit in rows. If 6 sit in each row, 2 students are left over. If 8 sit in each row, 2 rows are left empty with all others full. How many students are there?

A) 56
B) 62
C) 44
D) 50

Q134. Five cars are parked in a row: red, blue, white, black, green (not in this order). The white car is in the middle. The red car is to the left of the white car and next to it. The black car is at the right end. The blue car is not at an end. Where is the green car?

A) Fourth from the left
B) At the right end
C) Second from the left
D) At the left end

Q135. A person climbs a 20 m pole. Each hour he climbs 5 m but slips back 3 m. In how many hours will he reach the top?

A) 7 hours
B) 9 hours
C) 10 hours
D) 8 hours

Q136. Data sufficiency: How many students are in the class?

I. Ravi's rank is 12th from the top and 18th from the bottom.

II. There are 5 more boys than girls.

A) Only I is enough
B) Only II is enough
C) Both are needed
D) Neither is enough

Q137. A, B, C, D and E each work on a different day, Monday to Friday. B works on Monday. C works on Friday. D works the day after A. E does not work on Tuesday. On which day does D work?

A) Tuesday
B) Thursday
C) Wednesday
D) Monday

Q138. The ages of A, B and C add up to 60. A is twice as old as B, and C is 10 years younger than A. How old is C?

A) 24
B) 18
C) 14
D) 28

Q139. Six friends — P, Q, R, S, T, U — are seated around a hexagonal table. P is opposite Q. R is next to P. S is opposite R. T is next to Q. Who is opposite T?

A) U
B) P
C) R
D) S

Q140. Inequality: $J \le K < L$, $M > L$, $N = K$. Which is definitely true?

A) $J > M$
B) $N > L$
C) $N < J$
D) $M > N$

Q141. A number lock has 3 dials, each with digits 0–9. How many different codes are possible if no digit is repeated?

A) 504
B) 900
C) 720
D) 1,000

Q142. Mr. Sharma has three children. The eldest is a boy. The youngest is a girl. The middle child has a brother and a sister. What can we say about the middle child?

A) The middle child must be a boy
B) There is no middle child
C) The middle child must be a girl
D) The middle child can be a boy or a girl

Q143. A shop sells biscuits only in packs of 3 and 5. What is the largest number of biscuits that CANNOT be bought exactly?

A) 7
B) 8
C) 11
D) 4

Q144. Five students A–E sat an exam. B scored more than D but less than E. A scored less than D. C scored more than E. Who scored the second lowest?

A) A
B) D
C) E
D) B

Q145. Statement: 'Every programmer in the team knows Python. Some programmers know Java.' Which must be true?

A) Everyone who knows Python is a programmer
B) All Java users are programmers
C) No programmer knows only Python
D) Some people who know Java know Python

Q146. A 6 × 6 chessboard-style grid is formed with alternating colours. How many squares of each colour are there?

A) 18 of each
B) 36 of each
C) 12 and 24
D) 16 and 20

Q147. A watchman finds that in every 4 hours a clock gains 2 minutes. If it shows the correct time at 6 AM on Monday, what time will it show at 6 PM on Tuesday?

A) 6:12 PM
B) 6:09 PM
C) 6:18 PM
D) 6:24 PM

Q148. If the code for 'COMPUTER' places letters at positions 1-8 and the code shuffles them as 2-1-4-3-6-5-8-7, what is the code for COMPUTER?

A) CMOPTUER
B) OCPMTURE
C) OCPMUTRE
D) OCMPUTER

Q149. In a group of 60 people, 35 like tea, 30 like coffee and 12 like neither. How many like both tea and coffee?

A) 5
B) 17
C) 13
D) 23

Q150. Data sufficiency: Is the number N divisible by 6?

I. N is divisible by 3.

II. N is even.

A) Only II is enough
B) Only I is enough
C) Both statements together are needed
D) Neither is enough

PART B

Answer Key

BEGINNER Questions 1 – 50

Q.No	Ans	Q.No	Ans	Q.No	Ans	Q.No	Ans	Q.No	Ans
1	A	2	B	3	C	4	C	5	D
6	B	7	C	8	A	9	A	10	D

PART C

How to Solve — Step-by-Step Solutions

Each solution shows the correct option and a simple way to reach it. Try to understand the method, not just the answer — the same method works for many similar questions.

BEGINNER Questions 1 – 50

Q1 Answer: A) R

P is 1st and Q is 2nd. S is 4th. The only place left for R is 3rd.

Q2 Answer: B) A > C

A is bigger than B, and B is bigger than C, so A is bigger than C.

Q3 Answer: C) Ben

Order: Tom > Sam > Ben. Ben is the youngest.

Q4 Answer: C) 5

Opposite faces add to 7, so the face opposite 2 is 7 − 2 = 5.

Q5 Answer: D) 3

Like at least one = 30. Cricket + Football − Both = 30 → 18 + 15 − Both = 30 → Both = 3.

Q6 Answer: B) 4th from the top

Green is 5th (bottom). Blue is just above green → 4th from the top.

Q7 Answer: C) 3

There are 2 small triangles plus the big triangle that contains both. Total = 3.

Q8 Answer: A) Monday

Two days before Wednesday: Tuesday (1 day), Monday (2 days).

Q9 Answer: A) 16

R = 3 + 5 = 8, so R × 2 = 16.

Q10 Answer: D) 4

Anu takes seat 1 and Bala seat 2. Seats 3, 4, 5 and 6 are to Bala's right → 4 students.

Q11 Answer: C) B

Order from left: A, B, C. B is in the middle.

Q12 Answer: C) 5

All brothers share the same 2 sisters. Children = 3 brothers + 2 sisters = 5.

Q13 Answer: B) Some rectangles are squares

Every square is inside the group of rectangles, so at least some rectangles are squares.

Q14 Answer: A) West

12 is north, so 3 is east, 6 is south and 9 is west. At 9:00 the hour hand points at 9 → west.

Q15 Answer: A) Divya

Priya < Riya < Divya. Divya scored the highest.

Q16 Answer: D) 7

Blue = Total − Red = 12 − 5 = 7.

Q17 Answer: D) Sunday

The day before Friday is Thursday. Three days after Thursday is Sunday.

Q18 Answer: C) 12:45

10:00 + 2 hours = 12:00, + 45 minutes = 12:45.

Q19 Answer: A) 12

A cube has 6 faces, 8 corners (vertices) and 12 edges.

Q20 Answer: C) D

A and C are opposite each other. The remaining two seats go to B and D, which are also opposite each other.

Q21 Answer: D) X is taller than Z

X > Y > Z in height, so X is taller than Z.

Q22 Answer: B) 2

The apples box and the mixed box both contain apples → 2 boxes.

Q23 Answer: C) 8

The numbers go up by 2. After 6 comes 8.

Q24 Answer: A) 2

A is a brother (boy). B is a sister (girl). C is a boy. So there are 2 boys.

Q25 Answer: B) 15

25 + 30 − Both = 40 → Both = 15.

Q26 Answer: A) Chitra

Arun → Bhavna → Chitra. Chitra finished last of the three.

Q27 Answer: D) 6

Days are numbered from Monday: Thu = 4, Fri = 5, Sat = 6.

Q28 Answer: C) 2

A diagonal splits a rectangle into 2 triangles.

Q29 Answer: A) 16th

From bottom = 20 − 5 + 1 = 16th.

Q30 **Answer: B) 7 > 5 > 3**

From biggest to smallest: 7, 5, 3.

Q31 **Answer: C) 6**

'All but 6 run away' means 6 did not run away. So 6 cows are left.

Q32 **Answer: D) 6**

Gita = 4, so Sita has at least 5, and Neha has at least 6. Only 6 fits.

Q33 **Answer: D) 5**

Four small 1 × 1 squares plus one large 2 × 2 square = 5.

Q34 **Answer: A) 9**

From 9 AM to 6 PM is 9 hours.

Q35 **Answer: C) Mohan**

Rohan is shortest and Sohan is not tallest, so Mohan must be the tallest.

Q36 **Answer: B) Amit plays a sport**

Every student plays a sport, and Amit is a student, so Amit plays some sport (we do not know which).

Q37 **Answer: A) Square**

The pattern alternates circle and square. After a circle comes a square.

Q38 **Answer: D) 2**

The middle of 5 is the 3rd house. Houses 1 and 2 are to its left → 2.

Q39 **Answer: B) 3:05**

2:15 + 45 minutes = 3:00, + 5 more minutes = 3:05.

Q40 **Answer: A) Statement I alone is enough**

Statement I gives x = 7 directly. Statement II says only that x is positive, which does not give a value.

Q41 **Answer: C) 3rd**

R > P > Q > S. Q is 3rd tallest.

Q42 **Answer: A) 9**

Total = 4 + 6 − 1 = 9.

Q43 **Answer: C) Yellow**

Order from top: blue, green, yellow. Yellow is at the bottom.

Q44 **Answer: D) 3**

Bottom = 7 − 4 = 3.

Q45 **Answer: B) 13**

Kavya was born later, so she is younger: 15 − 2 = 13.

Q46 **Answer: A) 7**

Passengers = 28 − 7 + 12 = 33. Empty = 40 − 33 = 7.

Q47 **Answer: A) A working day**

Monday is a holiday, and every holiday is followed by a working day, so Tuesday is a working day.

Q48 **Answer: D) 6**

A triangular prism has two triangle ends, each with 3 corners. 3 + 3 = 6.

Q49 **Answer: D) 4**

Each gets 9 ÷ 3 = 3 slices. Divya gets one more → 4.

Q50 **Answer: B) CAB**

3 = C, 1 = A, 2 = B → CAB.

INTERMEDIATE Questions 51 – 100

Q51 Answer: C) 2nd from the left

A = 1, C = 3, E = 4. Seats 2 and 5 remain for B and D. B is not next to A, so B = 5 and D = 2.

Q52 Answer: A) U

Seats 1–6 clockwise: P = 1, S = 4. Facing the centre, P's right is the anticlockwise neighbour, so Q = 6 and R (opposite Q) = 3. Seats 2 and 5 are left for T and U, and they are opposite each other. So U is opposite T.

Q53 Answer: C) Each statement alone is enough

I: if n^2 is even, n must be even. II: if n + 3 is odd, n is even. Each statement alone answers the question.

Q54 Answer: D) No day works for all three

Ravi: Tue, Wed, Fri. Sita: Mon, Wed, Thu, Fri. Common: Wed, Fri. Hari cannot do Wed or Fri. So there is no common day.

Q55 Answer: B) S > R

Rearrange P + S = Q + R as S − R = Q − P.

Since Q > P, the right side is positive, so S − R > 0 → S > R.

Q56 Answer: A) 24

64 cubes → 4 × 4 × 4. Cubes with one painted face are in the middle of each face: $(4 - 2)^2 = 4$ per face. 6 faces × 4 = 24.

Q57 Answer: B) 20

At least one = 60 + 45 − 25 = 80. Neither = 100 − 80 = 20.

Q58 Answer: C) Part C

D > C > B > A > E. The second heaviest is C.

Q59 Answer: D) cup 12 milk 21 tea 30

Words in alphabetical order: cup, milk, tea. Numbers ascending: 12, 21, 30. Place them in the same word-number pattern: cup 12 milk 21 tea 30.

Q60 Answer: A) About 10:09 AM

Take the distance as 210 km (any value works). Train 1 speed = 210 ÷ 3.5 = 60 km/h. Train 2 speed = 210 ÷ 3 = 70 km/h.

By 9:00 Train 1 has gone 60 km, leaving 150 km. They close the gap at 60 + 70 = 130 km/h → 150 ÷ 130 ≈ 1.15 hours ≈ 69 minutes.

9:00 + 69 minutes ≈ 10:09 AM.

Q61 Answer: C) Both statements together are needed

I alone: R = M + 4 (two unknowns). II alone: M = R/2 (two unknowns). Together: R = R/2 + 4 → R = 8. Both are needed.

Q62 Answer: B) 14

1 × 1 squares: 9. 2 × 2 squares: 4. 3 × 3 squares: 1. Total = 14.

Q63 **Answer: D) No error**

A is older than only E, so A is 4th and E is 5th. Among B, C, D: D > C > B. So D is the oldest.

Q64 **Answer: C) S**

Q is Wednesday, so P is Tuesday and S is Thursday.

Q65 **Answer: A) P is R's mother**

P + Q: P is Q's wife. Q × R: Q is R's father. So P is R's mother.

Q66 **Answer: C) 10%**

Passed at least one = 70 + 60 − 40 = 90%. Failed both = 100 − 90 = 10%.

Q67 **Answer: D) 6**

In the first view 1 is adjacent to 2 and 3. In the second, 6 is adjacent to 2 and 3. Two faces that share the same two neighbours and never appear together must be opposite: 1 and 6.

Q68 **Answer: B) A > D**

A ≥ B and B > C = D, so A > D. The others cannot be confirmed.

Q69 **Answer: A) 78**

1 + 2 + … + 12 = 12 × 13 ÷ 2 = 78.

Q70 **Answer: D) Red**

Yellow above Blue, Blue above Green, Green above Red. From top: Yellow, Blue, Green, Red. Red is at the bottom.

Q71 **Answer: B) 53.5**

Arrange in order: 38, 45, 52, 55, 61, 70. The median of an even list is the average of the two middle values: (52 + 55) ÷ 2 = 53.5.

Q72 **Answer: C) It did not rain**

If 'rain → cancelled' is true, then 'not cancelled → no rain' is also true (contrapositive). So it did not rain.

Q73 **Answer: C) Both statements together are needed**

I alone: if y is negative, 2y < y. II alone says nothing about x. Together: x = 2y with y > 0 means x > y.

Q74 **Answer: A) Mother**

Son > Father > Daughter > Mother. The mother is the shortest.

Q75 **Answer: B) 6**

3 choices for the first chair, 2 for the second, 1 for the third: 3 × 2 × 1 = 6.

Q76 **Answer: C) 3**

Ravi is at position 3. Gita is at position 8 − 2 + 1 = 7. People between = positions 4, 5, 6 → 3.

Q77 **Answer: B) 5**

Mondays fall on 1, 8, 15, 22 and 29 → 5 Mondays.

Q78 **Answer: C) Part C**

A > B > D > C. C scored the least.

Q79 **Answer: C) 17**

Engineers = only engineers + both = 12 + 5 = 17.

Q80 **Answer: A) K**

M is at seat 5. N is left of J, and K is between J and L, so the order N, J, K, L fits seats 1–4. The middle (seat 3) is K.

Q81 **Answer: B) 8**

The diagonals create 4 small triangles. Each half of the square cut by one diagonal is also a triangle: 2 per diagonal × 2 diagonals = 4. Total = 8.

Q82 **Answer: A) 4**

'blue' is common to the first two phrases and has code 2. So in 'blue yellow' = '2 4', yellow = 4.

Q83 **Answer: D) A, C, B, D**

D must be last, A before B and C before D. Only A, C, B, D satisfies all three.

Q84 **Answer: C) Both statements together are needed**

I alone: many rectangles have perimeter 20. II alone: breadth is unknown. Together: 2(6 + b) = 20 → b = 4, area = 24 cm².

Q85 **Answer: A) Turn one on for a while, turn it off, turn another on, then enter and check light and heat**

Turn switch 1 on for a few minutes, then off; turn switch 2 on and enter. If the bulb is on → switch 2. If off but warm → switch 1. If off and cold → switch 3.

Q86 **Answer: C) S > P**

P < Q ≤ R = S, so P < S, i.e. S > P. The relation of T with P or Q is not fixed.

Q87 **Answer: D) No error**

From north to south: D, A, B, C. D is the farthest north.

Q88 **Answer: D) Friday**

X is Wednesday. Two days after Wednesday is Friday.

Q89 **Answer: A) 15**

Only German = German − Both = 25 − 10 = 15.

Q90 **Answer: B) 6**

A = 2B, C = B + 6. 2B + B + B + 6 = 30 → 4B = 24 → B = 6.

Q91 **Answer: D) Sunday**

25 − 1 = 24 days later. 24 = 3 weeks + 3 days. Thursday + 3 = Sunday.

Q92 **Answer: C) 6**

Each pair plays once: 4C2 = 4 × 3 ÷ 2 = 6 matches.

Q93 **Answer: C) Part C**

B is on floor 4. D < C < A among floors 1–3, so D = 1, C = 2, A = 3.

Q94 **Answer: D) Anyone inside the hall has a ticket**

'Only ticket holders can enter' means entry requires a ticket. So everyone inside must have one. Having a ticket does not force anyone to enter.

Q95 **Answer: B) 5 minutes**

Each machine makes 1 bolt in 5 minutes. 100 machines working together make 100 bolts in the same 5 minutes.

Q96 **Answer: A) 24**

Multiples of both 3 and 4 are multiples of 12. Between 20 and 30 the only one is 24.

Q97 **Answer: A) 11th**

From right = 21 − 11 + 1 = 11th. She is exactly in the middle.

Q98 **Answer: B) Only B**

Try B truthful: then C lies, so 'A and B both lie' is false — fine, since B is truthful. B truthful means A's statement 'B is lying' is false, so A lies. Result: only B tells the truth, and everything is consistent.

Q99 **Answer: A) Tea**

Arjun must drink juice. Bindu cannot drink tea, and juice is taken, so Bindu drinks coffee. Chetan drinks tea.

Q100 **Answer: B) Only I is enough**

I alone: 10 June is 7 days after 3 June, so it is also a Tuesday. II is not needed.

ADVANCED Questions 101 – 150

Q101 **Answer: D) None — they are neighbours**

Number the seats 1–8 round the table. A = 1, so E = 5. B is next to A, so B = 8 (or 2). C is opposite B → seat 4 (or 6). Either way C sits right next to E, so nobody is between them.

Q102 **Answer: B) Only I is enough**

x/y > 0 means x and y have the same sign, so xy > 0. Statement I alone answers it. II alone: x = 1, y = −3 gives xy < 0; x = −1, y = −2 gives xy > 0 — not enough.

Q103 **Answer: C) Q**

R = Wed. Two people between R and V → V is on Saturday (Thu and Fri between) — V cannot be on Sunday because U must come after V. So V = Sat, U = Sun. T = Mon, P = Fri.

Tuesday and Thursday remain for Q and S. Q is before S → Q = Tuesday, S = Thursday.

Q104 **Answer: A) 27**

125 = 5 × 5 × 5. Unpainted cubes form the inner block $(5 - 2)^3 = 3^3 = 27$.

Q105 **Answer: D) 3rd**

Chetan = 5, Esha = 4. Ajay is not at an end and Bina is just right of him, so Ajay = 2, Bina = 3, Deepa = 1. Bina is 3rd from the left.

Q106 **Answer: A) Only I follows**

F > A > B ≥ C ≥ D, so F > D (I follows). E > C and B ≥ C — E and B cannot be compared, so II does not follow.

Q107 **Answer: B) 67**

Use the three-set formula: E + H + T − (EH + ET + HT) + EHT = 40 + 30 + 25 − (15 + 10 + 8) + 5 = 95 − 33 + 5 = 67.

Q108 **Answer: C) Part C**

Test each culprit. If C did it: A false, B false, C false ('I did not' is a lie), D: 'B is lying' is true. Exactly one truth ✓. Other cases give two or more true statements.

Q109 **Answer: C) Both statements together are needed**

I alone: 18, 27, 36, … many options. II alone: 21, 42, 63, 84. Together: t = 2u and t + u = 9 → u = 3, t = 6, N = 63.

Q110 **Answer: B) Only I is enough**

I: divide by 2 → x + y = 9. That answers the question alone. II gives only the difference, not the sum.

Q111 **Answer: B) A**

D = 6, E = 1, B = 4, C = 5 (just above B). Floors 2 and 3 remain. A is on an even floor → A = 2, F = 3.

Q112 **Answer: A) All three follow**

King-queens are princes, so some princes are kings (II). They are not soldiers, so some kings are not soldiers (I). All queens are princes and no prince is a soldier, so no queen is a soldier (III).

Q113 **Answer: A) Cat**

B = parrot. A cannot have cat or dog, and parrot is taken, so A = fish. C cannot have cat, so C = dog. D = cat.

Q114 **Answer: B) 29 48 13 62 75**

One bubble-sort pass compares neighbours left to right: (48,29) swap → 29 48; (48,75) no swap; (75,13) swap → 13 75; (75,62) swap → 62 75. Result: 29 48 13 62 75.

Q115 **Answer: D) 120**

Divisible by 2, 3 and 5 means divisible by 30. Multiples of 30: 90, 120, 150. Only 120 lies between 100 and 150.

Q116 **Answer: C) 18**

A 2 × 3 grid has 3 horizontal lines and 4 vertical lines. Rectangles = C(3,2) × C(4,2) = 3 × 6 = 18.

Q117 **Answer: C) Both statements together are needed**

I alone does not place R. II alone does not place P. Together: P > Q > R, so P is the tallest.

Q118 **Answer: C) T4**

T1 is 2nd and T2 comes after T1. T5 is 5th. T4 must be before T3. The 1st slot cannot be T2 (after T1) or T3 (after T4), so it must be T4.

Q119 **Answer: D) 4**

S = 10, R = 6. P > Q > T among {2, 4, 8}: P = 8, Q = 4, T = 2.

Q120 **Answer: A) Monday**

Day after tomorrow = Sunday → today = Friday. Yesterday = Thursday. Three days before Thursday = Monday.

Q121 **Answer: A) Yellow**

Back is opposite front. Blue is in front, and yellow is opposite blue, so yellow is at the back.

Q122 **Answer: C) C, D, E, A, B**

C beats D and no one beats C, so C is first. D > E > A > B from the other clues. Order: C, D, E, A, B.

Q123 **Answer: B) 30**

Make the green value the same in both ratios: R : G = 8 : 12 and G : B = 12 : 15. So R : G : B = 8 : 12 : 15, total 35 parts.

70 ÷ 35 = 2 balls per part. Blue = 15 × 2 = 30.

Q124 **Answer: D) 5th**

P = 1, R = 2, O = 7, M = 6. N is between R and Q, so N = 3 and Q = 4. Q is above L, so L = 5.

Q125 **Answer: B) Only I is enough**

I: $5^2 + 12^2 = 25 + 144 = 169 = 13^2$, so it is right-angled — enough alone. II: one angle 50° does not fix the others.

Q126 **Answer: C) 8**

Matches = 2 × nC2 = n(n − 1) = 56 → n = 8.

Q127 **Answer: A) C**

If C is the thief: A truthful, B false, C false → one truth ✓. If A were the thief: B and C both true ×. If B were the thief: A and C both true ×.

Q128 **Answer: D) 44**

They overlap 22 times and are opposite 22 times in 24 hours. Total = 44.

Q129 **Answer: C) A**

C = Wednesday. D before C → Monday or Tuesday. B and A must be consecutive days. Possible: B = Thu, A = Fri. Then D and E take Mon/Tue. E not on Friday ✓. Any other placement of B/A (Mon–Tue) would leave E or D on Friday, but D must be before Wednesday and E cannot be Friday. So A went on Friday.

Q130 **Answer: D) 32**

Replace: 36 ÷ 4 × 3 + 10 − 5 = 9 × 3 + 5 = 27 + 5 = 32.

Q131 **Answer: B) Only I follows**

The triangles that are squares cannot be rectangles → some triangles are not rectangles (I). Nothing links circles to squares, so II does not follow.

Q132 **Answer: B) 6**

Let ₹10 coins = x, ₹5 coins = 14 − x. 10x + 5(14 − x) = 100 → 5x + 70 = 100 → x = 6.

Q133 **Answer: A) 56**

Let rows = r. 6r + 2 = 8(r − 2) → 6r + 2 = 8r − 16 → r = 9. Students = 6 × 9 + 2 = 56.

Q134 **Answer: D) At the left end**

White = 3, red = 2, black = 5. Blue is not at an end, so blue = 4. Green = 1 (left end).

Q135 **Answer: B) 9 hours**

Net gain is 2 m per hour, but in the last hour he reaches the top before slipping.

He needs to be at 15 m (or higher) at the start of an hour so a 5 m climb reaches 20 m. After 7 hours he is at 14 m; after 8 hours at 16 m. In the 9th hour he climbs to 21 m → reaches the top in 9 hours.

Q136 **Answer: A) Only I is enough**

I: Total = 12 + 18 − 1 = 29 — enough alone. II gives only a difference, not a total.

Q137 **Answer: C) Wednesday**

Tuesday, Wednesday and Thursday remain for A, D and E. D is the day after A, so (A, D) is (Tue, Wed) or (Wed, Thu).

If (Wed, Thu), E would be on Tuesday, which is not allowed. So A = Tue, D = Wednesday, E = Thu.

Q138 **Answer: B) 18**

A = 2B, C = 2B − 10. 2B + B + 2B − 10 = 60 → 5B = 70 → B = 14. A = 28, C = 18.

Q139 **Answer: A) U**

Seats 1–6: P = 1, Q = 4. R next to P → seat 2 (or 6). S opposite R → seat 5. T next to Q → seat 3 or 5; 5 is taken, so T = 3. U = 6. Opposite T (3) is seat 6 → U.

Q140 **Answer: D) M > N**

N = K < L < M, so M > N. The other options are not supported.

Q141 **Answer: C) 720**

First dial 10 choices, second 9, third 8: 10 × 9 × 8 = 720.

Q142 **Answer: D) The middle child can be a boy or a girl**

If the middle child is a boy, his siblings are a boy and a girl → he has a brother and a sister ✓. If a girl, her siblings are a boy and a girl → she also has a brother and a sister ✓. Both fit.

Q143 **Answer: A) 7**

Check small numbers: 3 ✓, 5 ✓, 6 ✓, 7 ✗, 8 = 3 + 5 ✓, 9 ✓, 10 ✓, 11 = 6 + 5 ✓. Once three numbers in a row (8, 9, 10) work, every larger number works by adding 3s.

Shortcut for two pack sizes a and b with no common factor: largest impossible = ab − a − b = 15 − 3 − 5 = 7.

Q144 **Answer: B) D**

C > E > B > D > A. The second lowest is D.

Q145 **Answer: D) Some people who know Java know Python**

The programmers who know Java also know Python (every programmer does). So some Java users know Python.

Q146 **Answer: A) 18 of each**

A 6 × 6 grid has 36 squares. With alternating colours, half are each colour: 18 and 18.

Q147 **Answer: C) 6:18 PM**

From 6 AM Monday to 6 PM Tuesday = 36 hours. Gain = 36 ÷ 4 × 2 = 18 minutes. It shows 6:18 PM.

Q148 **Answer: B) OCPMTURE**

Swap each pair: CO → OC, MP → PM, UT → TU, ER → RE. Result: OCPMTURE.

Q149 **Answer: B) 17**

People who like at least one = 60 − 12 = 48.

Tea + Coffee − Both = 48 → 35 + 30 − Both = 48 → Both = 17.

Q150 **Answer: C) Both statements together are needed**

A number is divisible by 6 only if it is divisible by both 2 and 3. Each statement alone gives only one of these; together they give both.
