About this section

Attention to Detail questions check how accurately you read and compare information — codes, IDs, email addresses, numbers, names and records. In real IT jobs one wrong character can break a configuration, a payment or a customer record. Compare items character by character, in small groups of 3–4, and never assume two long strings are the same just because they start and end the same way.

How to use this question bank

- Part A has all 150 questions, grouped by difficulty. Attempt them on your own first, with a timer if you can (about 1 minute per question).
- Part B is the answer key. Check your answers only after finishing a full level.
- Part C explains how to solve every question in simple steps. Read the solution even for the ones you got right — it often shows a faster method.
- Mark the questions you got wrong and attempt them again after two or three days.
